

CLAIM AMENDMENTS:

1-3. (canceled)

4. (currently amended) ~~The spectacles according to claim 1, wherein~~
Spectacles for presbyopia comprising:
right and left spectacle lenses for correcting presbyopia;
right and left side pieces for holding the right and left spectacle lenses in
front of right and left eyes of a user, respectively; and
at least one slit provided above the right and left spectacle lenses
extending horizontally over the right and left spectacle lenses, and
a distance of said at least one slit is adjustable.

5-9. (canceled)

10. (currently amended) ~~The spectacles according to claim 9,~~ Spectacles
for presbyopia comprising:
right and left spectacle lenses for correcting presbyopia;
a frame for supporting said right and left spectacle lenses;
right and left side pieces respectively pivoted to right and left sides of
said frame for holding the right and left spectacle lenses in front of right and
left eyes of a user; and

at least one elongated slit provided on said frame extending horizontally over the right and left spectacle lenses;

wherein said frame includes an elongated upper frame beam extending horizontally over said right and left spectacle lenses and said slit is formed by said elongated upper frame beam and an elongated beam like member provided on the frame beam, and said elongated beam-like member is secured to said elongated upper frame beam movably at least in an up and down direction so as to change a distance of the slit.

11. (currently amended) ~~The spectacles according to claim 6,~~
Spectacles for presbyopia comprising:

right and left spectacle lenses for correcting presbyopia;

a frame for supporting said right and left spectacle lenses;

right and left side pieces respectively pivoted to right and left sides of said frame for holding the right and left spectacle lenses in front of right and left eyes of a user; and

at least one elongated slit provided on said frame extending horizontally over the right and left spectacle lenses;

wherein said frame includes an elongated upper frame beam extending horizontally over said right and left spectacle lenses and said slit is formed by said elongated upper frame beam and an elongated beam like member provided on the frame beam, and said elongated beam-like member is rotatably secured

to said elongated upper frame beam at both ends thereof by means of hinges such that the elongated beam-like member is folded on a front surface of the elongated upper frame beam.

12. (canceled)
